The Light [House]

The report discusses certain area of the coastline that is known as the ‘solid coast’ in Italian. This area is characterized by its natural beauty and its minimal impact on the environment. The design of the building is inspired by the surrounding landscape, which includes cliffs, beaches, and the sea. The building is designed to be a part of the landscape, rather than a separate entity. The structure is made of sustainable materials and is designed to be energy-efficient. The building is intended to be a place for research, education, and cultural activities. The design incorporates elements of the natural environment, such as the sea and the cliffs, into the architecture. The building is designed to be a place of learning and exploration, where visitors can learn about the natural environment and the importance of sustainability.
